European Technical Assessment

ETA-19/0542

English translation prepared by DIBt

Page 2 of 46 | 14 April 2022

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Würth Injection system WIT-PE 1000 for concrete" is a bonded anchor consisting of a mortar cartridge with injection mortar WIT-PE 1000 and a steel element according to Annex A 3. The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 and/or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 6, C 8 to C 11, C 13 to C 16, B 3
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1, C 7, C 12, C 17
Displacements under short-term and long-term loading	See Annex C 18 to C 20
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 21 to C 28

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 14 April 2022 by Deutsches Institut für Bautechnik

Base materials: - Compacted, reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013 + A1:2016. - Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016.				
Use conditions (Environmental conditions): - Structures subject to dry internal conditions (all materials). - For all other conditions according to EN 1993-1-4:2006+A1:2015 corresponding to corrosion resistance class: • Stainless steel Stahl A2 according to Annex A 4, Table A1: CRC II • Stainless steel Stahl A4 according to Annex A 4, Table A1: CRC III • High corrosion resistance steel HCR according to Annex A 4, Table A1: CRC V				
Würth injection system WIT-PE 1000 for concrete			Annex B 1	
Intended Use Specifications				

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fasteners are designed under the responsibility of an engineer experienced in fasteners and concrete work.
- The fasteners are designed in accordance to EN 1992-4:2018 and Technical Report TR 055, Edition February 2018

Installation:

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer (HD), hollow (HDB), compressed air (CD) or diamond drill mode (DD).
- Overhead installation allowed.
- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Working time and curing time

Annex B 5

Installation instructions

Drilling of the bore hole (HD, HDB, CD)

- 1a. Hammer drilling (HD) / Compressed air drilling (CD)
Drill a hole to the required embedment depth.
Drill bit diameter according to Table B1, B2 or B3.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2. Proceed with Step 2.

- 1b. Hollow drill bit system (HDB) (see Annex B 4)
Drill a hole to the required embedment depth.
Drill bit diameter according to Table B1, B2 or B3.
The hollow drilling system removes the dust and cleans the bore hole.
Proceed with Step 3.

Attention! Standing water in the bore hole must be removed before cleaning.

Compressed Air Cleaning (CAC):

All diameter in cracked and uncracked concrete

- 2a. Blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

- 2b. Brush the bore hole minimum 2x with brush WIT-RB according to Table B4 over the entire embedment depth in a twisting motion. (If necessary, a brush extension shall be used.)

- 2c. Finally blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

**Cleaned bore hole has to be protected against re-contamination in an appropriate way,
If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.**

Würth injection system WIT-PE 1000 for concrete

Intended Use
Installation instructions

Annex B 6

Installation instructions (continuation)

Drilling of the bore hole (DD)

- 1a. Diamond drilling (DD)
Drill a hole to the required embedment depth required
Drill bit diameter according to Table B1, B2 or B3.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2.

Flush & Compressed Air Cleaning (SPCAC):

All diameter in uncracked concrete

- 2a. Flushing with water until clear water comes out.

- 2b. Brush the bore hole minimum 2x with brush WIT-RB according to Table B4 over the entire embedment depth in a twisting motion. (If necessary, a brush extension shall be used.)

- 2c. Flushing again with water until clear water comes out.

- 2d. Blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

- 2e. Brush the bore hole minimum 2x with brush WIT-RB according to Table B4 over the entire embedment depth in a twisting motion. (If necessary, a brush extension shall be used.)

Würth injection system WIT-PE 1000 for concrete

Intended Use

Installation instructions (continuation)

Annex B 7

Installation instructions (continuation)

- 2f. Finally blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

Cleaned bore hole has to be protected against re-contamination in an appropriate way, If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

3. Screw on static-mixing nozzle WIT-PE / WIT-MX, and load the cartridge into an appropriate dispensing tool.
For every working interruption longer than the maximum working time t_{work} (Annex B 5) as well as for new cartridges, a new static-mixer shall be used.

4. Mark embedment depth on the anchor rod.
The anchor rod shall be free of dirt, grease, oil or other foreign material.

5. Not proper mixed mortar is not sufficient for fastening.
Dispense and discard mortar until an uniform grey or red colour is shown (at least 3 full strokes).

6. Piston plugs WIT-VS and mixer nozzle extensions WIT-MV shall be used according to Table B4 for the following applications:
- Horizontal and vertical downwards direction: Drill bit- $\varnothing d_0 \geq 18$ mm and embedment depth $h_{ef} > 250$ mm
 - Vertical upwards direction: Drill bit- $\varnothing d_0 \geq 18$ mm
- Assemble mixing nozzle, mixer extension and piston plug before injecting mortar.

- 7a. **Injecting mortar without piston plug WIT-VS:**
Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension shall be used.)
Slowly withdraw of the static mixing nozzle avoid creating air pockets
Observe the temperature related working time t_{work} (Annex B 5).

Würth injection system WIT-PE 1000 for concrete

Intended Use
Installation instructions (continuation)

Annex B 8

Installation instructions (continuation)

- 7b. Injecting mortar with piston plug WIT-VS:**
Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension shall be used.) During injection the piston plug is pushed out of the bore hole by the back pressure of the mortar.
Observe the temperature related working time t_{work} (Annex B 5).

- 8.** Insert the anchor rod while turning slightly up to the embedment mark.

- 9.** Annular gap between anchor rod and base material must be completely filled with mortar. In case of push through installation the annular gap in the fixture must be filled with mortar also.
Otherwise, the installation must be repeated starting from step 7 before the maximum working time t_{work} has expired.

- 10.** For application in vertical upwards direction the anchor rod shall be fixed (e.g. wedges).

- 11.** Temperature related curing time t_{cure} (Annex B 5) must be observed.
Do not move or load the fastener during curing time.

- 12.** Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Table B1 or B3).
In case of static requirements (e.g. seismic), fill the annular gap in the fixture with mortar according to Annex 2. Therefore replace the washer by the filling washer WIT-SHB and use the mixer reduction nozzle WIT-MR-X.

Threaded rod			M12	M16	M20	M24	M27	M30
Uncracked and cracked concrete under seismic action (performance category C2) for a working life of 50 and 100 years								
All temperature ranges	$\delta_{N,eq,C2}(DLS)$	[mm]	0,21	0,24	0,27	0,36	0,92	0,70
	$\delta_{N,eq,C2}(ULS)$	[mm]	0,54	0,51	0,54	0,63	1,70	0,92

Table C36: Displacements under shear load (threaded rod)

Threaded rod			M12	M16	M20	M24	M27	M30
Uncracked and cracked concrete under seismic action (performance category C2) for a working life of 50 and 100 years								
All temperature ranges	$\delta_{V,eq,C2}(DLS)$	[mm]	3,1	3,4	3,5	4,2	4,0	3,8
	$\delta_{V,eq,C2}(ULS)$	[mm]	6,0	7,6	7,3	10,9	11,1	11,2

Würth injection system WIT-PE 1000 for concrete

Performances

Displacements under seismic action (performance category C2)
for a working life of 50 and 100 years (threaded rod)

Annex C 28
